

ESSENTIAL

Metamodeling on the Web

METADDEV

2022.09.26 Aachen, **LangDev2022**

Dr. Pedro J. Molina

Founder at Metadev

<https://metadev.pro>

Context

METADDEV

<https://metadev.pro>

Full remote company, **HQ** in Seville, Spain.

Focus on tools for:

- Conceptual Models,
- DSLs on the Web, &
- code generation for different domains.

Problems found

- Lack of pure **Web modeling environments**
- Lack of tools & tooling modeling on the cloud.

Essential is the 2nd version of a metamodeling tool able to describe:

- Metamodels
- Models

Provides JIT interpretation of models to provide:

- Editors
- Validators

Main features:

- Import & Export to: Essential / EMF-ECore / JSON Schema
- On the fly editors / forms
- On the fly model validation

<input type="text" value="TBC"/>	<input type="text" value="To Be Confirmed"/>

Technical Overview

- Core technology able to create specific DSLs in a fast & cheap way
- Fully implemented in **TypeScript & Angular**
- Able to transform models & generate code either browser or server-side
- Zero install required. SaaS model. Working in all major evergreen browsers

Use Cases

1. Define Metamodels
2. Explore editors for models
3. Validate documents
4. Import/Export to Essential, eCore an EMF
5. Editors for Structured Documents (Example EST40)

Industrial Usage

- **Metadev** builds DSLs for his customers using Essential as the base stack.
- No extra accidental complexity: Non-technical users working with **the abstraction level they expect**.
- Form Interpreter for Workflow engines
- Data/Structure modeling tool (JSON-Schema)
- Building blocks for Lowcode/Nocode tools
- Environments with heavy modeling can benefit from:
 - Cloud transformed models
 - Custom projections on user's browsers
 - Zero local install (no more update hell with Eclipse or Visual Studio for modeling plugins)
- Quid: <https://quid.metadev.pro> DSL for WebComponents
