# Agenda

- › What is the Arazzo Specification
- › Dominant use cases
- › Arazzo Specification structure
- › Example
- › Q&A

FS9U

**COMPANIES USING API'S WITHOUT  
HAVING ANY PROPER DOCUMENTATION**

GIF by [Butler University](#)

# Alignment Gap

Our APIs are well documented for our consumers

› Only 48% are confident their APIs are well documented and explain value for consumers

› ~43% unsure their processes will deliver appropriate developer experience (DX)

Our organization has good processes in place to ensure APIs can be efficiently consumed

# What is the Arazzo Specification?

- › It describes an approach to document use-case oriented workflows in a programmatically readable format.
- › A workflow is a series of API calls which when woven together accomplish some business objective.
- › The additional human readable nature improves the ability of API specifications to tell the story of the API(s) in a manner that can improve the consuming developer experience.

# Use cases

- › Deterministic recipes for the use of APIs
  - › Make sense of large unwieldy API description
  - › Bridge the *gap* where business flows span more than one API description
- › Living API documentation and improved consumer developer experience (DX)
- › Assertable business value
- › Targeted code generation tooling for APIs driven by use cases
- › Improved regulatory checks via assertable workflows
- › The AI potential for value orientated interaction with APIs

# Specification Structure

## BNPL by Free Debt Student Bank

### **Problem:**

Retailers are preparing for the student rush, but many students struggle to afford essential study equipment, such as laptops and software, without incurring immediate debt.

### **Solution:**

To ease the financial burden on students, Free Debt Student Bank has launched a BNPL service designed specifically for students. This service allows retailers to offer flexible, student-friendly payment plans at checkout, enabling students to buy necessary equipment with minimal upfront costs and 0% loan rates.

Retailers can seamlessly integrate this service to attract and support students during the busy back-to-school season.

# Example Workflow Use Case

› Enable a Buy Now Pay Later Checkout Option for Online Products

› Steps:

1. Check selected Products are BNPL eligible
2. Retrieve T&Cs and determine Customer eligibility
3. Create customer record if needed
4. Initiate BNPL Loan Transaction
5. Authenticate Customer and obtain Authorization for Loan
6. Calculate and retrieve Payment Plan to show within client app
7. Update Order Status

# Multiple APIs and Endpoints Required

Buy Now, Pay Later – Eligibility API

Eligibility Allows a customer or product to be checked for eligibility ^

- POST** /customers Create a customer
- POST** /products Retrieve eligible products

Auth Simple authentication for example purposes ^

- GET** /auth Get customer authorisation

Legal Legal requirements relating to Buy Now Pay Later products ^

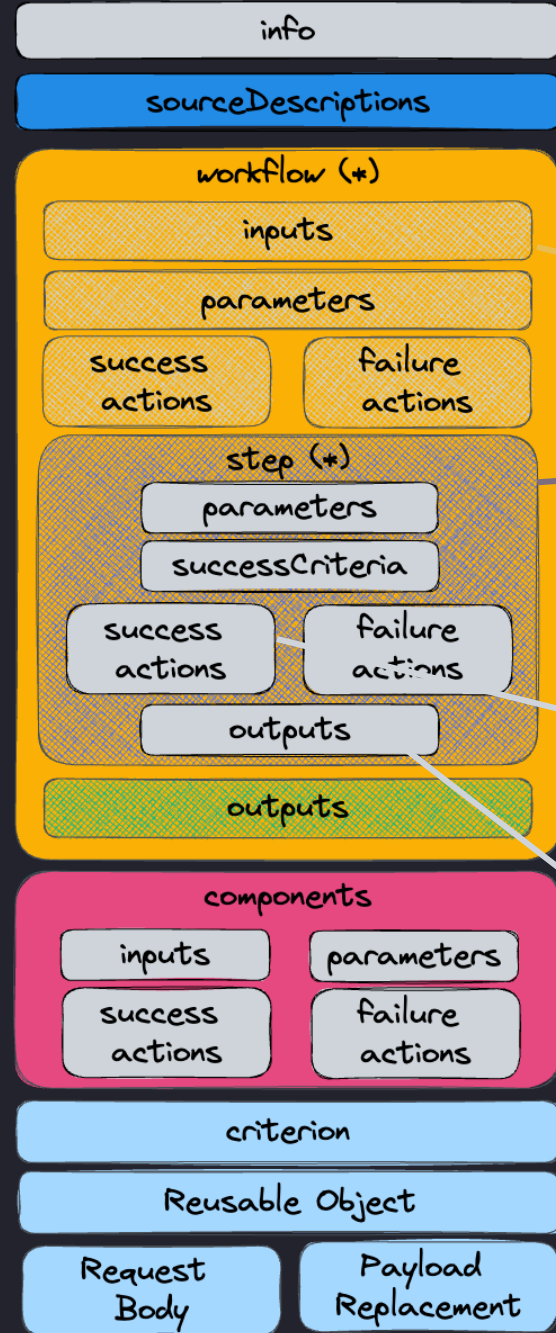

- GET** /terms-and-conditions Retrieve the terms and conditions for BNPL products

Buy Now, Pay Later – Loan API

Loan Initiation Allows a loan to be initiated and finalized ^

- POST** /loan-transactions Initiate a new loan transaction
- GET** /loan-transactions/{loanTransactionId} Retrieve loan
- PATCH** /loan-transactions/{loanTransactionId}/status Update loan status

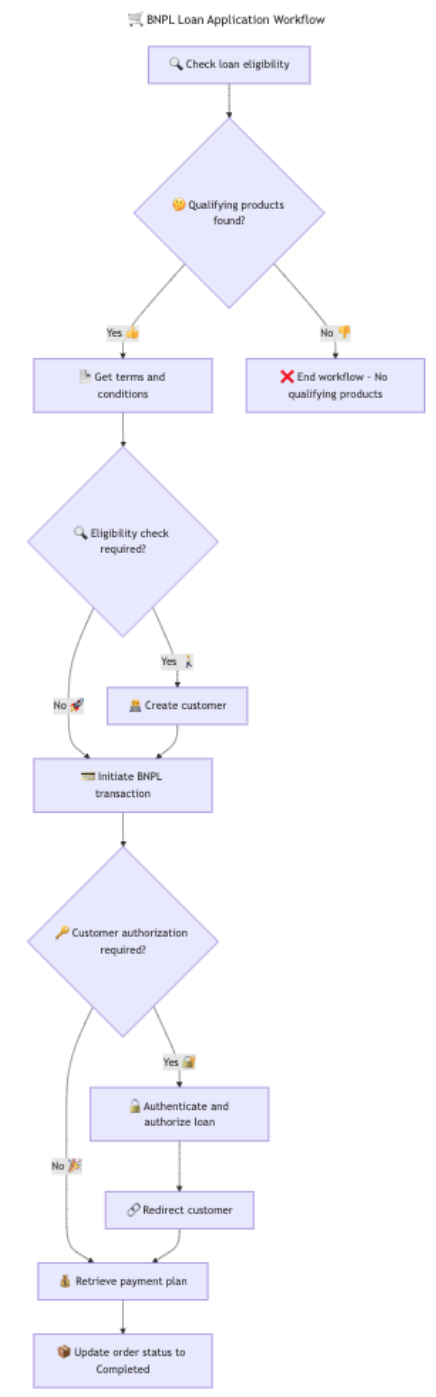

# Arazzo Specification 1.0.0

# Arazzo Specification GPT

The screenshot shows a web browser window with the URL `chatgpt.com/g/g-3jjZs0ALB-arazzo-specification-gpt`. The page title is "Arazzo Specification GPT". The main content area features a green circular logo with a white geometric pattern. Below the logo, the title "Arazzo Specification GPT" is displayed, followed by the author "By Frank Kilcommins". A descriptive paragraph states: "This GPT is a teammate that is well versed on the Arazzo Specification. It helps answer your questions regarding how to use the specification, what the benefits of the specification are. It also understand Arazzo Documents you provide, and help you craft your own Workflows to elevate your APIs." Three interactive buttons are provided: "What is the Arazzo Specification?", "What benefits and use cases are covered by...", and "Generate a sample Arazzo Document". At the bottom, there is a chat input field with the placeholder text "Message Arazzo Specification GPT" and a send button. A footer note reads: "SmartBear Marketing workspace chats aren't used to train our models. ChatGPT can make mistakes."
